## NiXPS

### NixOS configuration

The NiXPS configuration is an expression that takes, at least, `config`, `lib`, and `pkgs`.

```
<machines/nixps/configuration.nix 1>≡
{ config, lib, pkgs, ... }:
let
  username = "yurrriq";
in
{
  <Set the location to MSP 2>
  <Blacklist a few kernel modules 3>
  <Configure the LUKS device 4>
  <Configure the environment 5>
  <Configure the file systems 6>
  <Tweak hardware config 8>
  <Configure Bluetooth 9>
  <Configure PulseAudio and OpenGL 10>
  <Configure home-manager 11>
  <Configure networking 12>
  <Configure Nix 13>
  <Configure sudo 14>
  <Configure X Server 15>
  <Configure sops-nix 16>
  <Configure user 17>
}
```

Configure the [module](#).

FIXME

```
<Set the location to MSP 2>≡ (1)
airportCode = "MSP";
```

```
<Blacklist a few kernel modules 3>≡ (1)
boot.blacklistedKernelModules = [ "nouveau" "nvidia" "psmouse" ];
```

Configure the [LUKS](#)<sup>1</sup> devices.

1

```
<Configure the LUKS device 4>≡ (1)
boot.initrd.luks.devices.root.device = "/dev/nvme0n1p2";
```

```

<Configure the environment 5>≡ (1)
environment.homeBinInPath = true;
environment.pathsToLink = [
    "/lib/aspell"
    "/share/emacs/site-lisp"
    "/share/fish"
];

```

```

<Configure the file systems 6>≡ (1) 7>
fileSystems."/ " = {
    device = "/dev/disk/by-uuid/024a1168-9949-4cb2-bbd1-4b19a9d49ef2";
    fsType = "ext4";
};

fileSystems."/boot" = {
    device = "/dev/disk/by-uuid/7574-B246";
    fsType = "vfat";
};

fileSystems."/var/lib/docker/plugins" = {
    device = "/var/lib/docker/plugins";
    fsType = "none";
    options = [ "bind" ];
};

fileSystems."/var/lib/docker/overlay2" = {
    device = "/var/lib/docker/overlay2";
    fsType = "none";
    options = [ "bind" ];
};

```

```

<Configure the file systems 6>+≡ (1) <6
fileSystems."/mnt/music" = {
    device = "192.168.1.147:/volume1/homes/eric/music";
    fsType = "nfs";
    options = [ "noatime" "noauto" "rw" "x-systemd.automount" ];
};

```

```

## SRUXPS

### NixOS configuration

The SRUXPS configuration is an expression that takes, at least, `config`, `lib`, and `pkgs`.

```

<machines/sruxps/configuration.nix 22>≡
{ config, lib, pkgs, ... }:
let
  username = "e.bailey";
in
{
  <Set the location to MSP 23>
  <Configure the LUKS devices 24>
  <Configure vm.swappiness 25>
  <Add the coretemp kernel module 26>
  <Link some extra paths 27>
  <Configure the file systems 28>
  <Configure Bluetooth 30>
  <Configure home-manager 31>
  <Configure networking 32>
  <Configure Nix 33>
  <Configure sudo 34>
  <Configure services 35>
  <Configure user 36>
  virtualisation.docker.enable = true;
}

```

Describe the location module

```

<Set the location to MSP 23>≡ (22)
  airportCode = "MSP";

```

Configure the *LUKS* devices.

```

<Configure the LUKS devices 24>≡ (22)
boot.initrd.luks.devices = {
  cryptkey.device = "/dev/disk/by-uuid/603b64c6-8544-4b43-9b6a-7d8a08091514";

  cryptroot = {

### *Fish abbreviations*

“abbr manages abbreviations - user-defined words that are replaced with longer phrases after they are entered.

For example, a frequently-run command like `git checkout` can be abbreviated to `gco`. After entering `gco` and pressing `Space` or `Enter`, the full text `git checkout` will appear in the command line.”<sup>14</sup>

*<config/fish/abbrs.nix 153>*≡  
`{ ... }:`

```
{
  programs.fish.shellAbbrs = {
    <AWS Azure login abbreviation 154>
    <Kubernetes fish abbreviations 155>
    <Nix fish abbreviations 156>
    <ripgrep fish abbreviations 157>
  };
}
```

<sup>14</sup> abbr - manage fish abbreviations.  
 URL <https://fishshell.com/docs/current/cmds/abbr.html>

`NAAL`<sup>15</sup> IS COOL AND ALL, BUT...

... it’s a bad habit too. the `aal` abbreviation makes being not so sneaky a bit less annoying.

*<AWS Azure login abbreviation 154>*≡ (153)  
`aal = "aws-azure-login -no-prompt";`

<sup>15</sup> <https://github.com/yurrriq/naal>

`kubectl` IS VERY CUMBERSOME to type all the time. Using fish abbreviations, save some precious keystrokes. It’s definitely *worth the time*.

*<Kubernetes fish abbreviations 155>*≡ (153)  
`kc = "kubectl";`  
`kcd = "kubectl drain -delete-local-data -ignore-daemonsets";`  
`kcnp = "kubectl get pods -field-selector=spec.nodeName=";`  
`kcx = "kubectl -context";`  
`kgno = "kubectl get nodes";`  
`kn = "kubens";`  
`kns = "kubens";`  
`kt = "stern";`  
`kx = "kubectx";`

IT’S USEFUL TO RUN `nix build` with various flags. Why not save some keystrokes for those tasks, too?

*<Nix fish abbreviations 156>*≡ (153)  
`nb = "nix build";`  
`nbd = "nix build -dry-run";`  
`nbn = "nix build -no-link";`  
`nbo = "nix build -o";`

I'M NOT QUITE USED TO all the `ripgrep` flags yet. I'm also a lazy typist, so define some memorable abbreviations.

“Searches case insensitively if the pattern is all lowercase. Search case sensitively otherwise.”<sup>16</sup>

<sup>16</sup> Andrew Gallant. `rg` - man page.  
URL <https://www.mankier.com/1/rg>

```
<ripgrep fish abbreviations 157>≡ (153) 158>
  rg = "rg -S";
```

```
<ripgrep fish abbreviations 157>+≡ (153) <157 159>
  rga = "rg -hidden -iglob !.git";
  rgf = "rg -F";
```

“Never print the file path with the matched lines”, and “[s]uppress line numbers.”<sup>17</sup>

## *Taskwarrior*

### *Config*

```

<config/taskwarrior/default.nix 193>≡
{ config, lib, pkgs, ... }:

{

```

Install **Timewarrior**<sup>19</sup>.

<sup>19</sup> <https://timewarrior.net>

```

<config/taskwarrior/default.nix 193>+≡
    home.packages = with pkgs; [
        timewarrior
    ];

```

<193 195>

SINCE HOME-MANAGER GENERATES A READ-ONLY `.taskrc` FILE, and using `contexts`<sup>20</sup> requires Taskwarrior to be able to modify the it, use the following hacky workaround.

<sup>20</sup> <https://taskwarrior.org/docs/context.html>

Set `$TASKRC` to `~/.taskrc-dirty`, which must contain at least `include ~/.taskrc`.

```
<config/taskwarrior/default.nix 193>+≡                                <194 196>
  home.sessionVariables = {
    TASKRC = "~/.taskrc-dirty";
  };

```

DEFINE short Taskwarrior shell aliases.

```
<config/taskwarrior/default.nix 193>+≡                                <195 197>
  programs.fish.shellAliases = lib.mkIf (config.programs.fish.enable) rec {
    p = "task ls limit:page";
    po = "timew summary :week";
    pp = tbd;
    t = "task limit:page";
    ta = "task add";
    tbd = "task burndown.daily";
    te = "env VISUAL=$EDITOR task edit";
    tl = "task list";
    tm = "task mod";
    tw = "timew";
  };

```

CONFIGURE TASKWARRIOR, using [home-manager](https://github.com/rycee/home-manager)<sup>21</sup>.

<sup>21</sup> <https://github.com/rycee/home-manager>

`<config/taskwarrior/default.nix 193>+≡`

        ";
      };
  };
};

}
```

### on-exit Git hook

FIRST, use a fairly portable Bash shebang, and be safe.<sup>23</sup>

<sup>23</sup> `-e` exit immediately upon failure, treat `-u` unset variables as an error, disable `-f` file globbing, and fail if any part of a pipeline fails (`-o pipefail`).

```
<config/taskwarrior/on-exit-git.sh 200>≡                                     201>
#! /usr/bin/env bash
```

```
set -eufo pipefail
```

Run in debug mode<sup>24</sup>, if the environment variable `DEBUG` is nonempty. <sup>24</sup> i.e. echo commands

```
<config/taskwarrior/on-exit-git.sh 200>+≡                                     <200 202>
if [ -n "${DEBUG:-}" ]; then
  set -x
fi
```

PARSE the command line arguments.

Don't include the `api` version, `rc` file, or Taskwarrior version.

```
i="${1#api:}"
rc="${4#rc:}"
rsion="${6#version:}"
```

N.B. The positional arguments are formatted as `foo:bar`, where `foo` is the name of the argument, and `bar` is the value.

Parse and store the values of the arguments, `args`, `command`, and `data` directory.

```
<config/taskwarrior/on-exit-git.sh 200>+≡<201 203>
args="${2#args:}"
command="${3#command:}"
data="${5#data:}"
```

THROUGHOUT THIS SCRIPT, run `git` as if it were started in the Taskwarrior `data` directory, i.e. `git -C "$data"`.

```
<config/taskwarrior/on-exit-git.sh 200>+≡<202 204>
if git -C "$data" diff -quiet; then
    if [ -n "${DEBUG:-}" ]; then
        echo 'No changes to commit'
    fi
    exit 0
```

If there are no changes, `exit` successfully, printing an informative message if running in debug mode. `git diff` exits with status code `0` if there are no differences between the working tree and the index.

If present, stage the changes or die trying.

```
<config/taskwarrior/on-exit-git.sh 200>+≡<203 205>
elif ! git -C "$data" add -A; then
    echo 'Failed to add files to the index'
    exit 100
```

Try to commit the changes, or else.

```
<config/taskwarrior/on-exit-git.sh 200>+≡<204 206>
elif ! git -C "$data" commit -qm "$command: ${args#task $command}"; then
    echo 'Failed to record changes to the repository'
    exit 101
```

Quietly store the current contents of the index in a new commit, along with a log message describing the changes.

If running in debug mode, print a brief summary of the commit.

```
<config/taskwarrior/on-exit-git.sh 200>+≡<205>
elif [ -n "${DEBUG:-}" ]; then
    git -C "$data" log -oneline -1
fi
```

## *To-Do*

■ FIXME . . . . .	5
■ Figure out wtf is going on here . . . . .	6
■ adopt sops-nix . . . . .	8
■ Describe the location module . . . . .	10
■ btrfs clean boot? . . . . .	11
■ Configure Vim . . . . .	14
■ Link/document this . . . . .	23
■ Document podman vs dockerd . . . . .	25
■ Fix rootless podman . . . . .	25
■ Dig through <a href="https://github.com/mathiasbynens/dotfiles/blob/master/.macos">https://github.com/mathiasbynens/dotfiles/blob/master/.macos</a> . . . . .	27
