SRUXPS

NixOS configuration

The SRUXPS configuration is an expression that takes, at least, `config`, `lib`, and `pkgs`.

```
<machines/sruxps/configuration.nix 1>≡
{ config, lib, pkgs, ... }:
let
  username = "e.bailey";
in
{

  <Import hardware config and modules 2>

  <Set the location to MSP 3>

  <Configure the LUKS devices 4>

  <Link some extra paths 5>

  <Configure the file systems 6>

  <Configure Bluetooth 7>

  <Configure home-manager 8>

  <Configure networking 9>

  <Configure Nix 10>

  <Configure overlays 11>

  <Configure sudo 12>

  <Configure services 13>

  <Configure user 14>

}
```

Import the hardware config and other Nix *modules*.

(Import hardware config and modules 2)≡ (1)

```
imports = [
  <nixos-hardware/dell/xps/13-9380>
  ./hardware-configuration.nix
  ../../nix
  ../../modules/common.nix
  ../../modules/location.nix
  ../../modules/nixos.nix
  ../../modules/packages.nix
  <home-manager/nixos>

Fish abbreviations

“abbr manages abbreviations - user-defined words that are replaced with longer phrases after they are entered.

For example, a frequently-run command like `git checkout` can be abbreviated to `gco`. After entering `gco` and pressing `Space` or `Enter`, the full text `git checkout` will appear in the command line.”⁹

SINCE HOME-MANAGER GENERATES A READ-ONLY `.taskrc` FILE, and using `contexts`¹⁵ requires Taskwarrior to be able to modify the it, use the following hacky workaround.

¹⁵ <https://taskwarrior.org/docs/context.html>

Set `$TASKRC` to `~/.taskrc-dirty`, which must contain at least `include ~/.taskrc`.

```

<config/taskwarrior/default.nix 184>+≡
    home.sessionVariables = {
        TASKRC = "~/.taskrc-dirty";
    };

on-exit Git hook

FIRST, use a fairly portable Bash shebang, and be safe.¹⁷

```
<config/taskwarrior/on-exit-git.sh 189>≡
#!/usr/bin/env bash
```

```
set -eufo pipefail
```

Run in debug mode¹⁸, if the environment variable `DEBUG` is nonempty.

¹⁷ `-exit` immediately upon failure, treat `-Unset` variables as an error, disable `-file` globbing, and fail if any part of a pipeline fails (`-o pipefail`).

¹⁸ i.e. echo commands

```
<config/taskwarrior/on-exit-git.sh 189>+≡
if [ -n "${DEBUG:-}" ]; then
  set -x
fi
```

PARSE the command line arguments.

Don't include the `api` version, `rc` file, or Taskwarrior version.

N.B. The positional arguments are formatted as `foo:bar`, where `foo` is the name of the argument, and `bar` is the value.

```
i="${1#api:}"
rc="${4#rc:}"
rsion="${6#version:}"
```

Parse and store the values of the arguments, `args`, `command`, and `data` directory.

```
<config/taskwarrior/on-exit-git.sh 189>+≡
args="${2#args:}"
command="${3#command:}"
data="${5#data:}"
```

THROUGHOUT THIS SCRIPT, run `git` as if it were started in the Taskwarrior `data` directory, i.e. `git -C "$data"`.

```
<config/taskwarrior/on-exit-git.sh 189>+≡
if git -C "$data" diff -quiet; then
  if [ -n "${DEBUG:-}" ]; then
    echo 'No changes to commit'
  fi
  exit 0
```

If there are no changes, `exit` successfully, printing an informative message if running in debug mode. `git diff` `exits` with status code `0` if there are no differences between the working tree and the index.

If present, stage the changes or die trying.

```
<config/taskwarrior/on-exit-git.sh 189>+≡
elif ! git -C "$data" add -A; then
  echo 'Failed to add files to the index'
  exit 100
```

Try to commit the changes, or else.

`<config/taskwarrior/on-exit-git.sh 189>+≡`

```
elif ! git -C "$data" commit -qm "$command: ${args#task $command}"; then
    echo 'Failed to record changes to the repository'
    exit 101
```

Quietly store the current contents of the index in a new commit, along with a log message describing the changes.

`<193 195>`

If running in debug mode, print a brief summary of the commit.

`<config/taskwarrior/on-exit-git.sh 189>+≡`

```
elif [ -n "${DEBUG:-}" ]; then
    git -C "$data" log -oneline -1
fi
```
